

SPARE PARTS

Minimize downtime of your UPS system

Assurance in Reliability

Gutor UPS have a proven design life of 20 years. We achieve this degree of success by offering clients spare parts throughout this period. Spare parts are categorized into three groups: start-up, critical, and consumables. Accordingly, we highly recommend clients maintain a stock of start-up and critical spare parts to ensure faster recovery times.

The three categories of spare parts

- **Start-up spares:** We provide a set of recommended fuses and parts to be available during commissioning.
- **Critical spares:** A set of parts recommended for stock which are essential for troubleshooting and repair. These are parts which could cause a system shutdown upon failure.
- **Consumable:** Spares which have limited operational life, which must be replaced at specific intervals. These are related to preventative maintenance and include fans, capacitors, batteries, power supplies etc.

Consult us for a detailed spare parts strategy customized for your installed base.

What are the benefits?

- Minimize downtime
- Reduce maintenance planners' workload
- Ensure around-the-clock peace of mind
- Reduce inventory replenishment
